

Finding answers in every binding curve

At Adamastor Bioservices we specialize in providing precise molecular interaction insights to support your drug development journey. Explore our services and discover how we can accelerate your research.

01. In vitro kinetic interactions

Surface Plasmon Resonance (SPR): Precise molecular interaction analysis for informed decision-making, applicable to a broad spectrum of biomolecular interactions across diverse research fields.

02. Binding kinetic on live cells

Real-Time Cell Binding Assays (RT-CBA): Unveiling live cellular interactions to provide dynamic, real-time insights into molecular behavior, driving breakthroughs in drug discovery and therapeutic development.

03. Expert tailored consulting

Supporting clients in assay development and interpreting results, enabling informed decisions in drug development and the confident presentation of findings.

We truly know what is behind the glossy surface of the instruments

Expertise

Our team comprises seasoned professionals with extensive experience in SPR and LigandTracer technologies.

Experience

Our team has been part of R&D at both a leading SPR manufacturer and a leading RT-CBA manufacturer.

Personalized Service

We provide customized solutions tailored to your specific needs and research goals.
