

HIGHLIGHT

LiveDrop^{bio}

Who are you?

LiveDrop is a Belgian tech start-up, spin-off from University of Liege. LiveDrop offers high-throughput solutions for monoclonal antibody discovery and 3D cell culture, based on droplet microfluidics technology. The team (15+) consists in biologists, engineers and software developers.

What is your expertise?

1) Designing, manufacturing & selling advanced droplet microfluidics instruments & consumables,

2) Cell-based assays and high-throughput library screening, helping to fast-track new antibody, enzyme, and 3D cell culture discoveries by months.

What are your key products or services?

- Our flagship product, ModaFlow, is the most intuitive advanced droplet microfluidics system,
- Microfluidic chips for cell (co)encapsulation, merging, pico-injection, and sorting,
- Custom development services to accelerate our client's research.

Can you sum up your company in 3 words?

- High throughput
- Easier
- Single-cell
