

# HIGHLIGHT

# Who are you?

MImAbs is a French CRO with 12 years of innovation in antibody science and a strong partnership-driven mindset. As part of Janvier Group Biosciences, we leverage cutting-edge technologies and deep expertise to support drug-development programs from early antibody discovery to advanced engineering and comprehensive characterization.

# What is your expertise?

Our team is composed of scientists committed to advancing therapeutic innovation through deep expertise in antibody discovery, engineering, analytical sciences, and pharmacology. With this know-how, we help accelerate development, de-risk key decisions, and guide programs toward impactful therapies.

# What are your key products or services?

We provide advanced antibody discovery using single B-cell screening from multiple species with a function-first approach. We also accelerate ADC development through our ADC Library program enabling rapid lead identification, efficient payload comparison, and early functional validation.

# Can you sum up your company in 3 words?

- Antibodies
- Discovery
- Partnership
