

HIGHLIGHT

eurofins

Who are you?

The Eurofins BioPharma Services network of companies is a first-class biopharmaceutical and medical device services partner. We work with pharmaceutical, chemical, biotechnology, medical device and cosmetic clients to cover the whole chain of drug development, thanks to an international network of laboratories and testing units with global reach, uniform QA systems, and high-quality services.

What is your expertise?

Launching early-phase clinical programmes shouldn't mean navigating complexity. Yet Phase I–II often bring multiple vendors, fragmented workflows, delays and rising costs. With tight timelines, limited material, and complex regulations, seamless coordination is key. At Eurofins, we simplify early development with integrated, end-to-end solutions — connecting IMP manufacturing, clinical operations, and bioanalysis. The result: reduced risk, full visibility, and faster progress to key milestones.

What are your key products or services?

Eurofins supports pharmaceutical and biotechnology companies across their Phase I and Phase II programmes through a single, coordinated network that connects manufacturing, clinical supply, clinical operations, bioanalysis and data science. By eliminating fragmentation, we simplify execution, reduce risk, and accelerate timelines - without compromising scientific rigour.

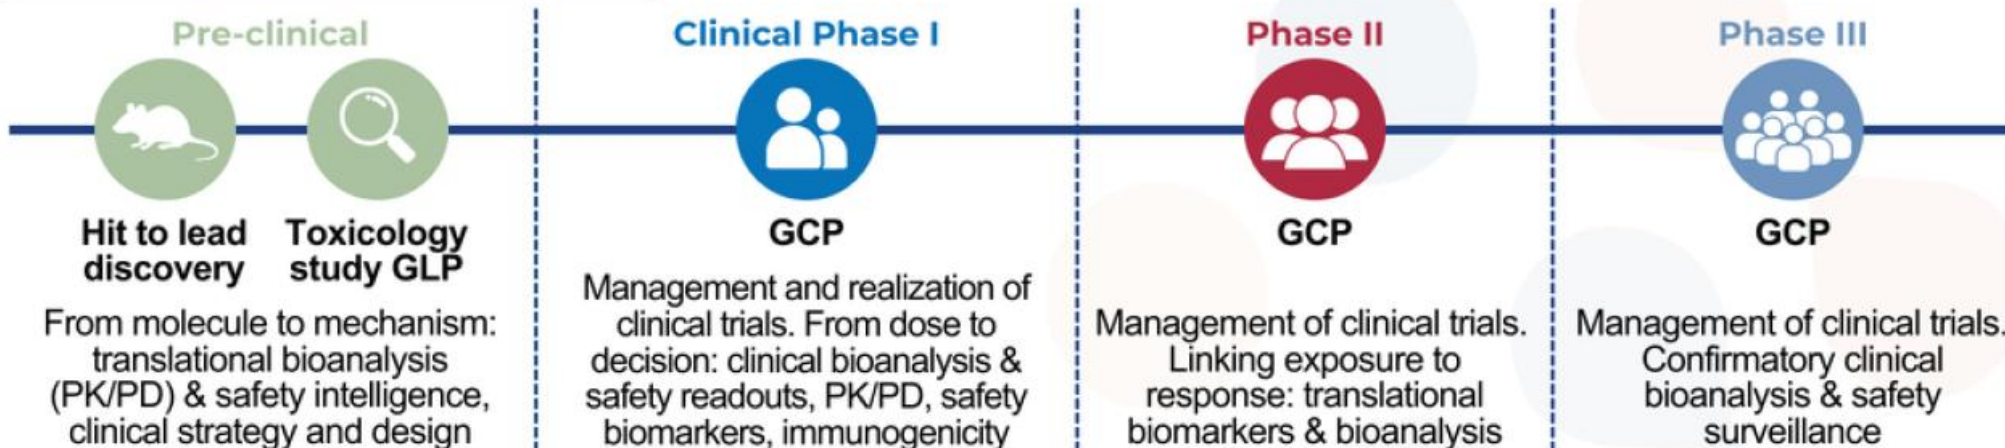

Can you sum up your company in 3 words?

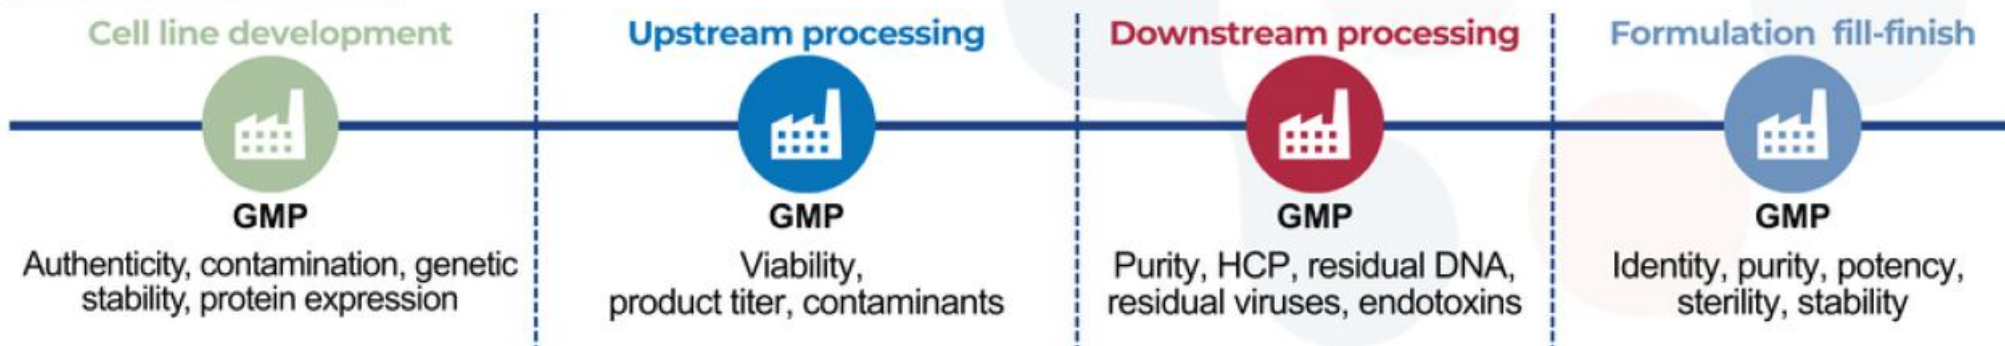

- 
- Proven expertise
 - Seamless integrated solutions
 - Speed & control

Clinical Research & Drug Development

Drug Manufacturing
