

HIGHLIGHT

Samplix 

Who are you?

Samplix is pioneering single-cell function-first analysis. With our Xdrop[®] platform, researchers can encapsulate live cells in droplets, enabling high-throughput screening, sorting, and molecular profiling to accelerate antibody discovery and cell therapy.

What is your expertise?

Samplix specializes in droplet microfluidics for single-cell workflows, combining cytometry compatibility with functional assays. By leveraging flow cytometry's many colors, multiplexed assays become possible. Researchers can analyze not only single cells but also their microenvironment, as secreted factors remain contained in droplets.

What are your key products or services?

Samplix offers the Xdrop[®] instrument, consumables, and application support for single-cell functional analysis. The technology integrates with standard flow cytometers and sorters, enabling researchers to screen, sort, and profile live cells for downstream assays such as scRNA-seq.

Can you sum up your company in 3 words?

- Single-cell
- Antibody discovery
- Microfluidics
